SYSPRO ShopClock

SYSPRO ShopClock captures employee data in real-time quickly and accurately, using touch screens, keyboards or scanning technology. Our latest version is even easier to use on the Shop Floor with a streamlined administration tool to help supervisors and administrators. We have also updated our logo!

What's New?

Easier to use on the Shop Floor

Better visibility throughout your Shop Floor

- Ensure Shop Floor employees view new jobs from SYSPRO when they're ready for them, by configuring the frequency at which suggested jobs are refreshed from SYSPRO
- Capture work center information against non-productive shift rules for employee breaks
- Post materials (kit issues) through to SYSPRO when logging off from an operation (configurable option)

Better customization

- ShopClock windows can be resized to be more responsive to the device used at each workstation
- Flexibility with the Window of Time group selection view which can now be set to either "all, none, single or multiple groups"
- Secure employees access to information by disabling Window of Time and Shop Floor display on the ShopClock client per workstation
- Ability to disable FastClock for workstations where this is not needed – not all workstations should have the ability to quickly log on/off

Improved overtime handling

- Greater visibility of your costs through additional flexibility while defining overtime rules for a work shift. Configure overtime hours and rates per day and/or week

New streamlined Administration tool

- Administration is now maintained in one easy-to-use console - the new SYSPRO ShopClock Administrator
- The Administrator window size can be customized be responsive to different workstations screen sizes
- Easily disable seasonal or past employees by flagging them as "inactive" in ShopClock –preventing their access to the system
- Setup a test environment by disabling Labor/Material posting to SYSPRO in a quick manner
- Troubleshooting is now easier than ever including:
  - Viewing all transactions and their statuses in the new transaction viewer (this was stored in log files in previous versions)
  - Viewing all client connections from both the Client and the Administrator. The ShopClock Administrator can now be used to disconnect a session
- Transaction history is now retained for editing for up to 35 days

Architectural changes

- All SYSPRO ShopClock data is now stored in SQL tables. For customers still on C-ISAM, SQL Express can be used
- Standard reports now use SYSPRO Reporting Services (SRS) and can easily be customized using your SRS skills
- SYSPRO ShopClock now supports connecting through SYSPRO WCF services
